A word from Ecommerce Europe

Online retail continues to grow significantly. Whereas retail in general is still facing difficult times, the European ecommerce turnover still managed to increase by 15% to €530 billion in 2016. We can safely state that online trading is here to stay.

Naturally, as Ecommerce Europe, we are very pleased with these figures, as stimulating European ecommerce is one of our main objectives. We strive to create a level playing field for online trading in EU countries and our work is more likely to be successful when we gather the right facts & figures. This European B2C Ecommerce Report provides us with the right ecommerce facts, figures and trends. As a result, these reports offer great insights into European ecommerce markets and contain valuable information for companies that want to start cross-border trading in Europe.

Therefore, we would like to thank the Ecommerce Foundation for their hard work in creating this report. Because of their meticulous research, we now have a strong basis for our activities. If you like to become involved with Ecommerce Europe or one of our national associations, please contact us through our website www.ecommerce-europe.eu or send us an email at info@ecommerce-europe.eu.
Ecommerce Europe, the European Ecommerce Association

About Ecommerce Europe
Through its 20 national associations, Ecommerce Europe represents over 25,000 online shops across Europe. Its mission: boost the ecommerce industry by helping decision makers shape policies fit for future sustainable growth. To do so, Ecommerce Europe takes initiatives to come up with innovative market solutions, provides a platform for expert discussion and facilitates connections between online retailers and relevant stakeholders. It also highlights the importance of ecommerce to the economy through the provision of in-depth research on the European and global markets. Additionally, Ecommerce Europe stimulates the industry by developing initiatives like its European Trustmark label.

Who can be involved?
Ecommerce Europe welcomes national ecommerce associations and companies selling goods and/or services online as (company) members. Besides this, it invites preferred suppliers to the European ecommerce industry and other organizations and NGO’s related to the ecommerce industry to become partners. Members and partners of Ecommerce Europe benefit from a wide variety of things: they are informed about and can influence European regulation, share and exchange knowledge with other stakeholders, network with peers and boost the visibility of their own organizations at the events that Ecommerce Europe organizes.

Ecommerce Europe Working Committees
Ecommerce Europe focuses on six key policy areas covered by its Working Committees:
• e-Regulations (consumer & contractual policies, internet security & data protection, ePrivacy, taxation, competition);
• e-Payments (online payments, e-identification);
• e-Logistics (cross-border parcel delivery).
The Working Committee meetings are an excellent opportunity for industry representatives from all over Europe to come together to share information and best practices and to discuss obstacles they face in their daily ecommerce operations. Ecommerce Europe shares the outcomes of its Working Committee Meetings with European policy makers through its Position Papers and its Ecommerce Europe Manifesto.

Thank you

Thank you for downloading this report. This report describes both the commercial opportunities, as well as its challenges for the main ecommerce markets in Europe. Europe is (slowly and with hiccups) moving towards a more uniform market. While cross-border ecommerce is increasing, there are still many barriers to overcome. We hope this report will help you overcome any challenges in selling online in the European market.

The Ecommerce Foundation is an independent non-profit organization, initiated by worldwide national ecommerce associations, as well as online and omnichannel selling companies. Our mission is to foster global digital trade, as peace is the natural effect of trade. By facilitating digital commerce we hope to make the world a slightly better place.

We especially would like to thank our Report Partners; namely EuroCommerce, Asendia Management, Ingenico, Manhattan Associates, SAP Hybris, and GfK. Without their support, this report would not have been created. Moreover, a great amount of gratitude is extended to Ecommerce Europe, the European ecommerce association for their unending support.

If you like our reports, please visit www.ecommercefoundation.org/reports to download our free reports. Your feedback is also very much appreciated. Please contact us at info@ecommercefoundation.org.

Jorij Abraham
MD Ecommerce Foundation
Ecommerce is changing our sector fundamentally, creating new business opportunities and models, new jobs, and new forms of interaction with consumers, with many consumers buying online and more retailers selling online. Growth in ecommerce in Europe is in double figures, and set to go on growing fast. Europe needs to shape its policies to allow consumers and traders to make the most of the potential of a market of 500 million Europeans. As the principal organisation representing retail and wholesale in Europe, we decided to support the European Ecommerce Report 2017. The report is unique in the scope and depth of its analysis of this growing market and sound methodology and research on which the Ecommerce Foundation based its work.

Christian Verschueren
Director-General
A Thank You to our Report Partners

Asendia is one of the world’s top three international mail, shipping and distribution organizations, delivering your packages, parcels and documents to more than 200 destinations across the globe. Formed as a partnership between La Poste and Swiss Post in 2012, the Asendia business employs more than 1,000 people worldwide, has offices in 15 countries and a global network of delivery partners to get your package where it needs to be, when it needs to get there.

GfK is the trusted source of relevant market and consumer information that enables its clients to make smarter decisions. More than 13,000 market research experts combine their passion with GfK’s 80 years of data science experience. By using innovative technologies and data sciences, GfK turns big data into smart data, enabling its clients to improve their competitive edge and enrich consumers’ experiences and choices.

Ingenico ePayments is the online and mobile commerce division of Ingenico Group. We are the trusted partner of over 65,000 small and large merchants who rely on us to make payments easy and secure for their customers. With advanced data analytics, fraud management solutions and cross-border commerce expertise, we help merchants optimize their business and grow into new markets around the world.

Manhattan Associates is a technology leader in supply chain and omni-channel commerce. We unite information across the enterprise, converging front-end sales with back-end supply chain execution. Our software, platform technology and unmatched experience help drive both top-line growth and bottom-line profitability for our customers. Manhattan Associates designs, builds and delivers leading edge cloud and on-premises solutions so that across the store, through your network or from your fulfilment centre, you are ready to reap the rewards of the omni-channel marketplace.

SAP Hybris solutions provide omnichannel customer engagement and commerce software that allows organizations to build up a contextual understanding of their customers in real time, deliver a more impactful, relevant customer experience, and sell more goods, services and digital content across every touchpoint, channel and device. SAP Hybris software for customer engagement and commerce provides organizations with the foundation, framework and business tools to create a holistic customer view across channels, simplify customer engagement and solve complex business problems.

Introduction to Europe
A Brief Introduction to Europe

In classical Greek mythology, Europa is the name of either a Phoenician princess or of a queen of Crete. The name contains the elements "wide, broad" [and "eye, face hence their composite Europe would mean "wide-gazing" or "broad of aspect"].

Europe covers about 10,180,000 square kilometers (3,930,000 sq mi), or 2% of the Earth's surface (6.8% of land area). Politically, Europe is divided into 47 sovereign states of which the Russian Federation is the largest and most populous. Europe has a total population of approximately 840 million (about 11% of world population) as of 2017.

Greece is the birthplace of Western civilization. The fall of the Western Roman Empire marked the end of ancient history and the beginning of the Middle Ages. Renaissance humanism, exploration, art, and science led to the modern era. From the Age of Discovery, Europe played a predominant role in global affairs. The Industrial Revolution, which began in Great Britain at the end of the 18th century, gave rise to radical economic, cultural, and social change in Western Europe. Both world wars took place for the most part in Europe, contributing to a decline in Western European dominance in world affairs by the mid-20th century as the Soviet Union and the United States took prominence. During the Cold War, Europe was divided along the Iron Curtain between NATO in the west and the Warsaw Pact in the east, until the revolutions of 1989 and fall of the Berlin Wall.

The political map of Europe is substantially derived from the re-organization of Europe, following the Napoleonic Wars in 1815. The prevalent form of government in Europe is parliamentary democracy, in most cases in the form of Republic; in 1815, the prevalent form of government was still the Monarchy. Europe's remaining eleven monarchies are constitutional.

The European Union is an economic and political partnership between 28 European countries and was created in the aftermath of the Second World War. Initially, it was established to foster economic cooperation, the idea being that countries that trade with one another become economically interdependent and will therefore be more likely to avoid conflict. In 1986, the tariffs between member states were abolished. Additionally, 12 member states decided to introduce one common currency (the euro) in 1998, and later on this Eurozone was expanded to 19 countries. While the European Union continuously strives the create a uniform (digital) market, it proves a difficult process. Living proof is the decision in 2016 of the United Kingdom to leave the EU.

Boosting cross-border ecommerce in Europe

Advocacy and lobbying
Home to the European institutions, Brussels is at the very heart of the European decision-making process. Since almost 80% of national legislations comes from Brussels, Ecommerce Europe helps shape European legislation which directly impacts ecommerce businesses in the Member States. Together with European policymakers, Ecommerce Europe works on a daily basis to create a European policy which removes the biggest obstacles for online merchants to expand their business cross-border.

Strategy
Ecommerce Europe’s strategy is based on advocacy, lobbying and communication. Together with its 20 national associations, Ecommerce Europe gathers issues and evidence of obstacles hampering the development of the sector and translates these into lobbying priorities. Through collaboration with other relevant stakeholders, and using its members’ expertise, Ecommerce Europe develops positions and proposes workable solutions to the European legislators in order to foster the growth of the European ecommerce industry.

Obstacles to cross-border ecommerce
In 2016, Ecommerce Europe launched a European-wide “Cross-border Ecommerce Barometer” amongst its membership base that represents more than 25,000 online shops. The results of the survey show that online merchants with cross-border ambitions are often held back by barriers such as legal uncertainty due to unclear or very different rules, taxation and payment systems that differ greatly, or high prices of delivery due to a lack of transparency. In the market. Other difficult barriers to overcome when selling abroad are related to (online) payments, competition issues, language, client relationships and marketing. Ecommerce Europe provides concrete recommendations on how to overcome these barriers to growth of ecommerce.

Solutions proposed by Ecommerce Europe
Ecommerce Europe works together with all European stakeholders to rapidly remove the remaining barriers in cross-border ecommerce. We identify problems as well as measure progress in the ecommerce market following from policy initiatives taken at EU level. This way, we are always well informed and ready to give evidence-based advice to policy makers. We recommend policy makers to support market initiatives, to abolish superfluous regulation and to only consider new regulatory structures if absolutely necessary. Also, we take up an active role in stimulating growth in areas where we think this is needed. An example of this is our pan-European Trustmark that can generate consumer trust in the cross-border market.

Marlene ten Ham
Secretary General of Ecommerce Europe

“As more than 80 % of national legislation is determined in Brussels, Ecommerce Europe’s Brussels team is at the heart of the European decision-making process. Through advocacy and lobbying, among other things, we strive to unlock the potential of cross-border ecommerce”
The ongoing strength of electronic commerce and industry innovation will fuel further growth in electronic payment volumes in Europe. However, SEPA and new EU regulations such as PSD2 are set to exert a considerable influence on the European payments market over the next few years. As such, compliance will be an important issue for merchants who want to take full advantage of the opportunities that the European market represents.

Inflation has decreased sharply over the last few years.

Throughout Europe, shoppers expect a consistent quality of retail experience, whether shopping with the same retailer in a physical store, via their website or through their smartphone. A personalised and connected experience across all channels, as well as friendly and well-informed personnel, raise the bar for retailers. Gaining a holistic view of shoppers, orders and inventory is the essential backbone of connected commerce. The challenge is now for retailers to bring together technology, processes and people to meet consumers’ shopping expectations, today and tomorrow.

What is your view on e-commerce in Europe?

European cross-border e-commerce is thriving, and is driving global growth. It was recently revealed that 6% of shoppers in Europe shop online every day. A few things are driving this: internet speeds are improving; smartphone use is increasingly, boosting mobile retail; and logistics networks across Europe are becoming more efficient and integrated.

How will delivery develop in Europe in the next two to three years?

European consumers are expecting more from their online buying experience. In the short term, postal companies that are B2C distribution specialists in their respective countries will be increasingly able to offer a globally integrated network to customers. Quality will improve, customer prices will come down and that should boost cross-border traffic across Europe. This promises to underpin further growth in the European market.

What are the main challenges with delivery at the moment in Europe?

The biggest challenge currently facing international e-retailers is the need to grow outside their borders and drive international expansion; to deal with the increasingly complex customs environment; and to meet customer expectations on tracking. Timely delivery is crucial but being able to track an order’s progress and electronic notification of delivery is equally important. So tracking of goods is no longer ‘a nice to have’, it’s a necessity.

It’s for that reason that at Asendia we offer the Fully-tracked Goods Service, which combines the convenience and flexibility of national postal networks, with the peace of mind of full traceability.

Renaud Marlière
Chief Marketing & Sales Officer at Asendia
To prepare for the nearby future, focus on GenZ! The next generation of consumers are the i-Brains. They are the first generation that is fully merged with smart phones and social media. These digital natives will be leading edge consumers that drive (mobile) disruption. And they will come fast. In 2020 the i-Brains will represent 40% of all European consumers.

Ecommerce in Europe is very dynamic and we observe very distinct stages of this development by country, impacting on the overall retail environment. E.g. in some South Western European Countries the early growth phase of online shopping drives the markets. In other more mature online markets a second impulse can be observed, triggered by the results of the disruptive impact that ecommerce had during the last decade on the retail scene.

Ecommerce successfully rests on Innovation and Attitude

Technology is key. Whether AI-powered chatbots that drive conversion through personalized communications, contextual ecommerce in-the-moment, shorter delivery times or seamless processes, winning innovations are all focused on delivering great experiences.

The companies that do best tend to see ecommerce as a strategic rather than a tactical asset. Instead of outsourcing online operations they build in-house expertise so they can run cloud-based solutions on their own terms. Doing this well means investing in a flexible, modern platform – plus of course talented people who can make the most of it – rather than focusing on a single-fix solution.

Ultimately, it’s about creating meaningful, personal interactions for consumers. Think about what sort of customer experience you expect in your own daily life. These are the benchmarks you should aim to beat. And to do this, you need to be able to manage the customer profile in real time, using contextual, in-the-moment commerce to reach them on multiple platforms throughout their journey.

For the people at the steering wheel, I’ve got one piece of advice: stay on your toes. There’s no single right answer. Learning from and adjusting to your customers is a constant process. If you can do that, you’ll do well.
Internet use & online shopping differs strongly across the EU

About the Report
Where to find our National Ecommerce Reports

The National Ecommerce Reports are published by the Ecommerce Foundation. They provide overviews of the mature and emerging markets in the field of ecommerce.

In total, the Ecommerce Foundation publishes multiple country reports and two overview reports per year, covering the most important ecommerce markets worldwide.

To have a tailor-made ecommerce report made, completely based on your wishes and requirements, please contact us via info@ecommercefoundation.org.

A light and full reports can be downloaded from: http://www.ecommercefoundation.org/reports.
Definitions related to the Internet & Ecommerce

- **Broadband access**: the availability of broadband is measured by the percentage of households that are connectable to an exchange that has been converted to support DSL technology, to a cable network upgraded for Internet traffic, or to other broadband technologies. It includes fixed and mobile connections (source: Eurostat).

- **Cross-border ecommerce**: percentage of ecommerce purchased at foreign sites.

- **Ease of Doing Business Index**: The Ease of Doing Business Index is developed by the World Bank, and averages the country's percentile rankings on nine topics. It is made up of a variety of indicators, giving equal weight to each topic. The rankings for all economies are benchmarked to June 2010. The Index covers 185 countries.

- **ecommerce (or electronic commerce), a subset of e-business**: any B2C contract on the sale of products or services fully or partly concluded by a technique for distance communication.

- **ecommerce GDP**: total amount of goods and services online divided by the total Gross Domestic Product (GDP).

- **Economic Freedom Index**: the Index of Economic Freedom is an annual guide published by The Wall Street Journal and The Heritage Foundation, Washington’s No. 1 think tank. For over a decade, the Wall Street Journal and The Heritage Foundation have tracked the march of economic freedom around the world with the influential Index of Economic Freedom. There are 5 categories, ranking from Free (with a score between 80 and 100) to Repressed (between 40 and 49.9).

- **E-households**: number of households that use the Internet for personal gain.

- **E-household expenditure**: expenditure per household that bought goods or services in the past year.

- **Global Online Measurement Standard for B2C ecommerce (GOMSEC)**: aims to provide guidelines to measure and monitor B2C ecommerce in order to enable all European countries to provide data with respect to the penetration of B2C ecommerce in a standardized way.

- **E-Government Index**: The UN’s E-Government Index provides a comparative assessment of the e-government development of UN Member States. One of the primary factors contributing to a high level of e-government development is concurrent past and present investment in telecommunication, human capital and provision of online services.

- **Gross Merchandise Volume**: the total sales facilitated by a third party, such as a market place.

- **E-services or electronic services**: “Deeds, efforts or performances whose delivery is mediated by information technology. Such e-service includes the service element of e-retailing, customer support, and service delivery.” This definition reflects three main components: service providers, service receivers and the channels of service delivery (i.e. technology). (Jennifer Rowley, Professor Information and Communications, Manchester Metropolitan University, UK)

- **Inactive online population**: users that have access to the Internet but have not (yet) purchased goods or services online in the past year.
Definitions related to the Internet & Ecommerce

- **Market place**: online platform on which companies (and consumers) sell goods and/or services.

- **Logistics Performance Index (LPI)**: The Logistics Performance Index (LPI) measures the “logistics friendliness” of 155 countries. It helps countries identify the challenges and opportunities they face in their trade logistics performance and what they can do to improve this. The Index is developed by the World Bank and is based on a worldwide survey of operators, such as global freight forwarders and express carriers.

- **Mobile commerce (or m-commerce)**: the ability to conduct commerce using a mobile device e.g. a mobile phone, a PDA, a smartphone, a tablet or other (emerging) mobile equipment.

- **Mobile subscriptions**: mobile cellular telephone subscriptions are subscriptions to a public mobile telephone service using cellular technology, which provide access to the public switched telephone network. Post-paid and prepaid subscriptions are included (source: Eurostat).

- **Networked Readiness Index (NRI)**: The NRI measures the tendency for countries to exploit the opportunities offered by information and communications technology (IT). The NRI comprises three components: the environment for IT offered by a given country or community, the readiness of the country's key stakeholders to use IT, and the usage of IT among these stakeholders.

- **Online buyer (or e-shopper, e-buyer)**: an individual who regularly bought or ordered goods or services through the Internet.

- **Online expenditure**: spending per user who purchased goods or services online.

- **Online Retail (or e-retail, electronic retail or retailing or even e-tailing)**: the selling of retail goods and services on the Internet. In the limited sense of the word, sectors such as online leisure travel, event tickets, downloading music or software are not included. Online-only retail shops are often referred to as pure players.

- **Penetration levels**: the percentage of a population using the Internet, mobile phones, smartphones or tablet devices.

- **Real economic growth rate**: a measure of economic growth from one period to another expressed as a percentage and adjusted for inflation. The real economic growth rate is a measure of the rate of change that a nation's gross domestic product (GDP) experiences from one year to another.

- **Retail sales**: the selling of mainly goods from businesses to individuals from a traditional or so-called bricks-and-mortar shop.

- **Statcounter research method**: Statcounter is a web analytics service and their tracking code is installed on more than three million sites globally. These sites cover various activities and geographic locations. Every month, Statcounter records billions of page views to these sites. For each page view, they analyze the browser/operating system/screen resolution used and they establish if the page view is from a mobile device. They calculate their Global Stats on the basis of more than fifteen billion page views per month, by people from all over the world onto more than three million member sites.
Global Online Measurement Standard for Ecommerce (GOMSEC)

GOMSEC aims to provide guidelines for measuring and monitoring B2C ecommerce. As a result, all countries worldwide are able to provide data with respect to the penetration of B2C ecommerce in a standardized way. All Ecommerce Foundation figures and estimates are based on GOMSEC, unless stated otherwise.

The GOMSEC reports on sales figures for the total B2C ecommerce worldwide and for each country separate in the country profiles, based on total sales of goods and services.

These total sales of goods and services are based on the areas/sectors/classification of areas and sectors, as stated on the next few pages.

All data reported in the national currency of the country involved is converted into euros according to the average (annual) rate of exchange as provided by, preferably, the European Central Bank (ECB) or the national bank of the particular country. The reference period that is used for this was from 1 January to 31 December of each report year. Growth rates are calculated and measured by the B2C ecommerce sales in the national currency.

Definition of B2C ecommerce sales

“Any B2C contract regarding the sale of goods and/or services, fully or partly concluded by a technique for distance communication.”

Technique for distance communication: means that can be used for communication regarding the offer made by the trader and the conclusion of a contract, without the necessity of the consumer and trader being in the same place at the same time.

Contract: a contract whereby use is made, either solely or in part, of one or more techniques for distance communication within the framework of a system organized by the trader for the distance sale of goods and/or services, up to and including the moment that the contract is concluded.

Classification of B2C ecommerce

The following classification on the next few pages provides an overview of areas and sectors included in GOMSEC.

Online purchases of the following items are excluded from GOMSEC:

- Transactions between private individuals/consumers (C2C), such as auctions and marketplaces, and between businesses (B2B)
- Online gambling and gaming
- Cars and other motor vehicles
- Houses and real estate
- Utilities (e.g. water, heating and electricity)
- Mortgages, loans, credit cards and overdrafts
- Savings accounts, funds, stocks&shares and bonds

B2C ecommerce therefore includes all online transactions between businesses and consumers using desktop computers, laptops, tablets, smartphones, point-of-sales and smart-wearables, for instance through online shops, physical stores (“online instore”), email, QR codes, catalogs, etc. B2C ecommerce includes Value Added Tax (VAT) or other sales tax, delivery costs and apps, but excludes returns.

Sources used in this report

The report could only be realized by consulting a great number of valuable sources. These were available in various countries and regions in Europe and around the globe. The wide variety of sources include public domain publications, blogs, websites, industry and financial specialist publications, regional and local news, annual reports, and press releases.

Sometimes the information sources are contradictory and sometimes different figures and data were given by varying sources within the same country, for example due to different definitions. In our reports we have mentioned the different sources, definitions and outcomes of such reports, studies and interpretations.

The report is based on information that we consider reliable, but we cannot vouch for it being completely accurate or complete, nor should it be relied upon as such. Opinions expressed are our current opinions as of the date of this report.

About the Ecommerce Foundation

The Ecommerce Foundation is an independent non-profit organization, initiated by worldwide national ecommerce associations and online and omnichannel selling companies from industries such as retail, travel & finance.

**Why an Ecommerce Foundation?**
Our mission is to foster global digital trade as peace is the natural effect of trade. By facilitating digital commerce we hope to make the world a slightly better place.

**How does the Foundation help?**
We facilitate the development of practical knowledge, insights and services for which individual institutions, retail and ecommerce associations and B2C selling companies do not have the (financial) resources and/or capabilities. By combining collective goals and efforts, the Ecommerce Foundation is able to realize projects which could not have been realized on an individual basis.

**What does the Ecommerce Foundation do?**
The Foundation is developing and offering several services such as the Ecommerce Benchmark, the EcommerceWiki and the National Ecommerce Reports. At the moment we are also researching if a Global Ecommerce Trustmark can be set-up to increase worldwide consumer trust and as a result global trade.
The Services of the Ecommerce Foundation

| 40+ National Ecommerce Reports supporting retailers going across borders |
|---|---|---|
| Every year a C-level study delegation travels to an inspiring location. Previous trips include Silicon Valley, Seattle, NY and China |
| The Global Ecommerce Summit & awards offer retailers insights into best practices from across the world |

| The Ecommerce Benchmark allows online retailers to compare & improve their ecommerce activities |
|---|---|---|
| The EcommerceWiki is the online handbook for ecommerce managers with templates, process descriptions, and more |
| EcommerceReports curates all ecommerce related research across the globe by adding an editorial board and peer review |

| Lectures & presentations are offered to help members look into the future of shopping |
|---|---|---|
| Custom research is done for a diverse set of topics both co-branded as well white labeled |
| Safe.Shop certifies local trust marks to issue the global ecommerce trust to promote and foster global digital trade. |
About the Authors

Jorij Abraham
Managing Director

Jorij Abraham has been active in the international ecommerce community since 1997. He was an Ecommerce Manager at Bijenkorf, TUI and Sanoma Media and Director of Consulting at Unic.

From 2013 to 2017 he has been Director of Research & Advice at Thuiswinkel.org and Ecommerce Europe (the Dutch and European Ecommerce Association).

Sara Lone
Research Analyst

Sara Lone recently moved to the Netherlands after graduating with her Masters degree in Public Policy from the University of California, Irvine.

She joins the Ecommerce Foundation with a background in economic research and policy analysis, having previously worked as a researcher in a California firm and interning as a policy analyst for a non-profit organization.
